Prompt per le immagini

Questo file contiene i prompt per generare tutte le immagini del gioco. I prompt sono in **inglese**, perché i generatori (Midjourney, Flux, SDXL, DALL·E, Imagen, Firefly) seguono meglio l'inglese. Le note intorno sono in italiano.

Salva ogni immagine riuscita nella cartella `finali/` **con il nome indicato** accanto al titolo di ogni prompt. Le prove scartate vanno in `bozze/`. Questo file esiste anche in versione `PROMPTS.html`, con un pulsante «Copia» per ogni prompt: è quella da aprire sul cellulare. Quando sono pronte, mandamele e le inserisco in schede e PDF.

Negativo (da incollare nel campo «negative prompt»)

cartoon, illustration, anime, 3D render, plastic skin, oversmoothed skin, airbrushed, text, letters, captions, watermark, logo, signature, modern smartphone, flat-screen TV, modern car, deformed hands, extra fingers, asymmetrical eyes, duplicate faces, stock photo smile, postcard beach, daylight, cheerful tourist mood

Prima di cominciare

Le tre regole che valgono per tutto

1. **Niente testo nell'immagine.** I generatori sbagliano le scritte. Dove un foglio, una lettera o un display deve «contenere» del testo, il prompt chiede una pagina con scrittura **illeggibile e sfocata**. Il testo vero (nei file `indizi/` e `oggetti/`) si aggiunge dopo, in impaginazione. Unica eccezione: la copertina.
2. **Nessun volto deve tradire il colpevole.** Tutti i ritratti hanno la stessa espressione: neutra, riservata, un po' sulla difensiva. Non generare sguardi colpevoli, sorrisi cattivi, ombre sinistre o mani nascoste, su Maleko come su chiunque altro, e niente di troppo rilassato o «innocente».
3. **Una sola epoca.** Honolulu, agosto 2004: niente smartphone, niente schermi piatti, niente auto moderne, niente auricolari. Telefoni a conchiglia, compatte digitali da 4 megapixel, registratori a microcassetta.

Cosa è deciso e cosa no

Costumi e accessori vengono dalle schede, e i giocatori li usano per riconoscersi: non cambiarli. **Etnia, tratti del volto e colore dei capelli non sono scritti nelle schede.** Seguono la composizione reale delle Hawaii: nel 2004 la maggior parte degli abitanti è di origine mista (hawaiana, giapponese, filippina, cinese, portoghese, samoana, bianca) e il locale è pieno di «local». Ogni personaggio ha quindi un'origine mista precisa. Se vuoi altro, cambia quelle parole e lascia il resto.

- **Luoghi:** orizzontale 16:9, almeno 1920×1080 px.

Come tenere i volti coerenti

Genera **prima** i ritratti dei giocatori, poi usa ognuno come immagine di riferimento (`--cref` in Midjourney, «character reference» altrove, «image prompt» al 60–70% negli altri strumenti) per le immagini in cui compare lo stesso personaggio. Tre famiglie devono somigliarsi (i tratti sono per l'origine scelta sopra):

- **Mahoe** (Akoni, Pua, Ike): fratelli. Stessa mascella larga, occhi infossati, naso largo.

- **Hanohano** (Maleko, Kalea): fratello e sorella. Stessi zigomi alti, occhi scuri e allungati, sopracciglia dritte.
- **Kealoha** (Keoki, Auntie Lei, Lani): Lani ha gli occhi del padre.

Nalu, Noe e Kapono non sono imparentati con nessuno.

Le tre foto della macchina di Noe (indizi 06 e 26)

Sono immagini **di gioco**: i giocatori le guardano e ci ragionano. Conta la composizione, non l'estetica. Stile diverso dal resto: **sembrano scatti di una compatta digitale del 2004**, con flash diretto, 4 megapixel, colori un po' slavati, rumore digitale, nessuna profondità di campo. Non usare [STYLE] qui. Se serve la data stampata in arancione in basso a destra, aggiungila dopo in impaginazione (`'04 8 14 23:12` , ecc.).

Elenco di controllo

Gruppo	File	Priorità
Foto di Noe (di gioco)	13, 14, 15	**Alta**: i giocatori le guardano
Ritratti	01–12	**Alta**
Indizi	16–30	Media: servono se stampi le carte con immagine

Oggetti personali	31–40	Media
Piatti	41–45	Solo con la cena
Luoghi	46–51	Bassa: per atmosfera
Copertina	52	Media

Se hai poco tempo: genera solo le **tre foto**, i **dieci ritratti dei giocatori** e la **copertina**. Il resto aggiunge atmosfera ma non cambia la partita.

Come lavorare con i piani gratuiti di ChatGPT e Gemini

Le cartelle

```
immagini/
  PROMPTS.md       questo file
  PROMPTS.html     la stessa cosa, per il cellu
  finali/          le immagini scelte, con il r
  bozze/           tutto il resto, senza fretta
```

Quando una bozza è quella buona, la copi in `finali/` col nome giusto. Il nome è l'unica cosa che mi serve per inserirla in schede e PDF.

Il metodo

1. **Un giorno, un gruppo.** I piani gratuiti concedono poche immagini al giorno, e i limiti cambiano senza preavviso: controllali nell'app. Procedi per priorità, non per numero. Giorno 1: ritratti 01–06. Giorno 2: ritratti 07–12. Giorno 3: le tre foto di Noe e la copertina. Poi indizi e oggetti, quando vuoi.
2. **Un personaggio, una conversazione.** Genera il ritratto, tienilo aperto e per ogni immagine successiva dello stesso personaggio scrivi «stessa persona di questa immagine» e incolla il prompt nuovo. È il modo più economico per tenere il volto coerente senza strumenti a pagamento.
3. **Le famiglie in sequenza.** Fai prima Akoni, poi Pua e Ike nella stessa conversazione di Akoni, chiedendo «fratello/sorella di questa persona». Lo stesso per Maleko e Kalea.
4. **Le tre foto di Noe sono le più difficili**, perché i generatori sbagliano il numero di

persone. Tira 3–4 tentativi per ognuna e scegli quella con le persone giuste, anche se è meno bella. Conta la composizione.

5. **Se compare del testo**, rigenera una volta con «no text, no letters». Se resta, lo copro io in impaginazione.
6. **Per gli oggetti puoi usare la fotocamera**: una busta, una chiave, una scatola di sigari veri, fotografati di sera con una lampada, costano meno di un'immagine generata e non sbagliano le dita. Per le carte indizio col testo è anche la soluzione più pulita.
7. **Chi fa cosa.** Non ho prove che uno dei due strumenti sia migliore sui volti. Fai un test con il ritratto 06 (Maleko) su entrambi e tieni quello che ti convince di più: poi usa sempre quello per tutti i personaggi.
